

Five public example pages, each seen from both sides of the interface: page evidence on the left, document output on the right.

The screenshot shows the left side of the interface for an academic paper. The title "Attention Is All You Need" is at the top. Below it, several author names and affiliations are listed, each with a small text box. A sidebar on the left contains additional text, including "03/6/2025 15:58" and "036 P.001/013".

(a) **Positioned reading.** Every word carries its pixel box and reading order, so a character in the output can be traced back to the page.

The screenshot shows the right side of the interface for a synthetic lab results table. The table has four columns: Test, Result, Unit, and Flag. The rows contain data for Hemoglobin, Platelets, Glucose, and Creatinine. The text "Synthetic example - no patient data" is at the bottom.

(b) **Table structure.** Cell geometry is recovered before any text is emitted; cells whose readings disagree are reread one at a time.

The screenshot shows the right side of the interface for a handwritten fax transmittal form. The form has several fields, including "To: Anthem", "From: 1888-251-2985", and "Date: 3-6-22". Handwritten text is visible in the "Comments" field.

(c) **Handwriting and faint text.** Form rows are found geometrically; handwritten lines are cropped at source resolution and passed to the specialist.

The screenshot shows the left side of the interface for a pediatric services form. It includes a "From:" field with the value "03/06/2025 15:58" and a "DATE:" field with the value "3-6-25". A "Confidence" score of 93.42% is displayed, along with a note that the confidence is not correct.

(d) **Confidence as evidence.** Scores are reported as uncalibrated evidence, not as correctness. A flagged reading stays pending until a human accepts, edits, or leaves it unresolved.

The screenshot shows the right side of the interface for a client franchises table. The table has five columns: Year, 2005, 2014, 2023, and 2024. The rows contain data for Average deposits (\$B), Deposits market share?, # of top 50 markets where we are #1 (top 3), Business Banking primary market share*, Client investment assets (\$B), Total payments volume (\$T)*, and % of digital non-card payments*.

(e) **One canonical revision.** The accepted revision renders to the highlighted UI, plain text, Markdown and JSON; cells still under review keep their flag through the render.

Figure 2: Example pages carried end to end by the pipeline — a clinical table, an academic paper, a handwritten fax and a dense financial table. Highlight colour in the output marks a reading's resolution state, not its confidence.
